

Expansion of Swedish-Santa Catarina Cooperation in the Aeronautical Sector

BACKGROUND

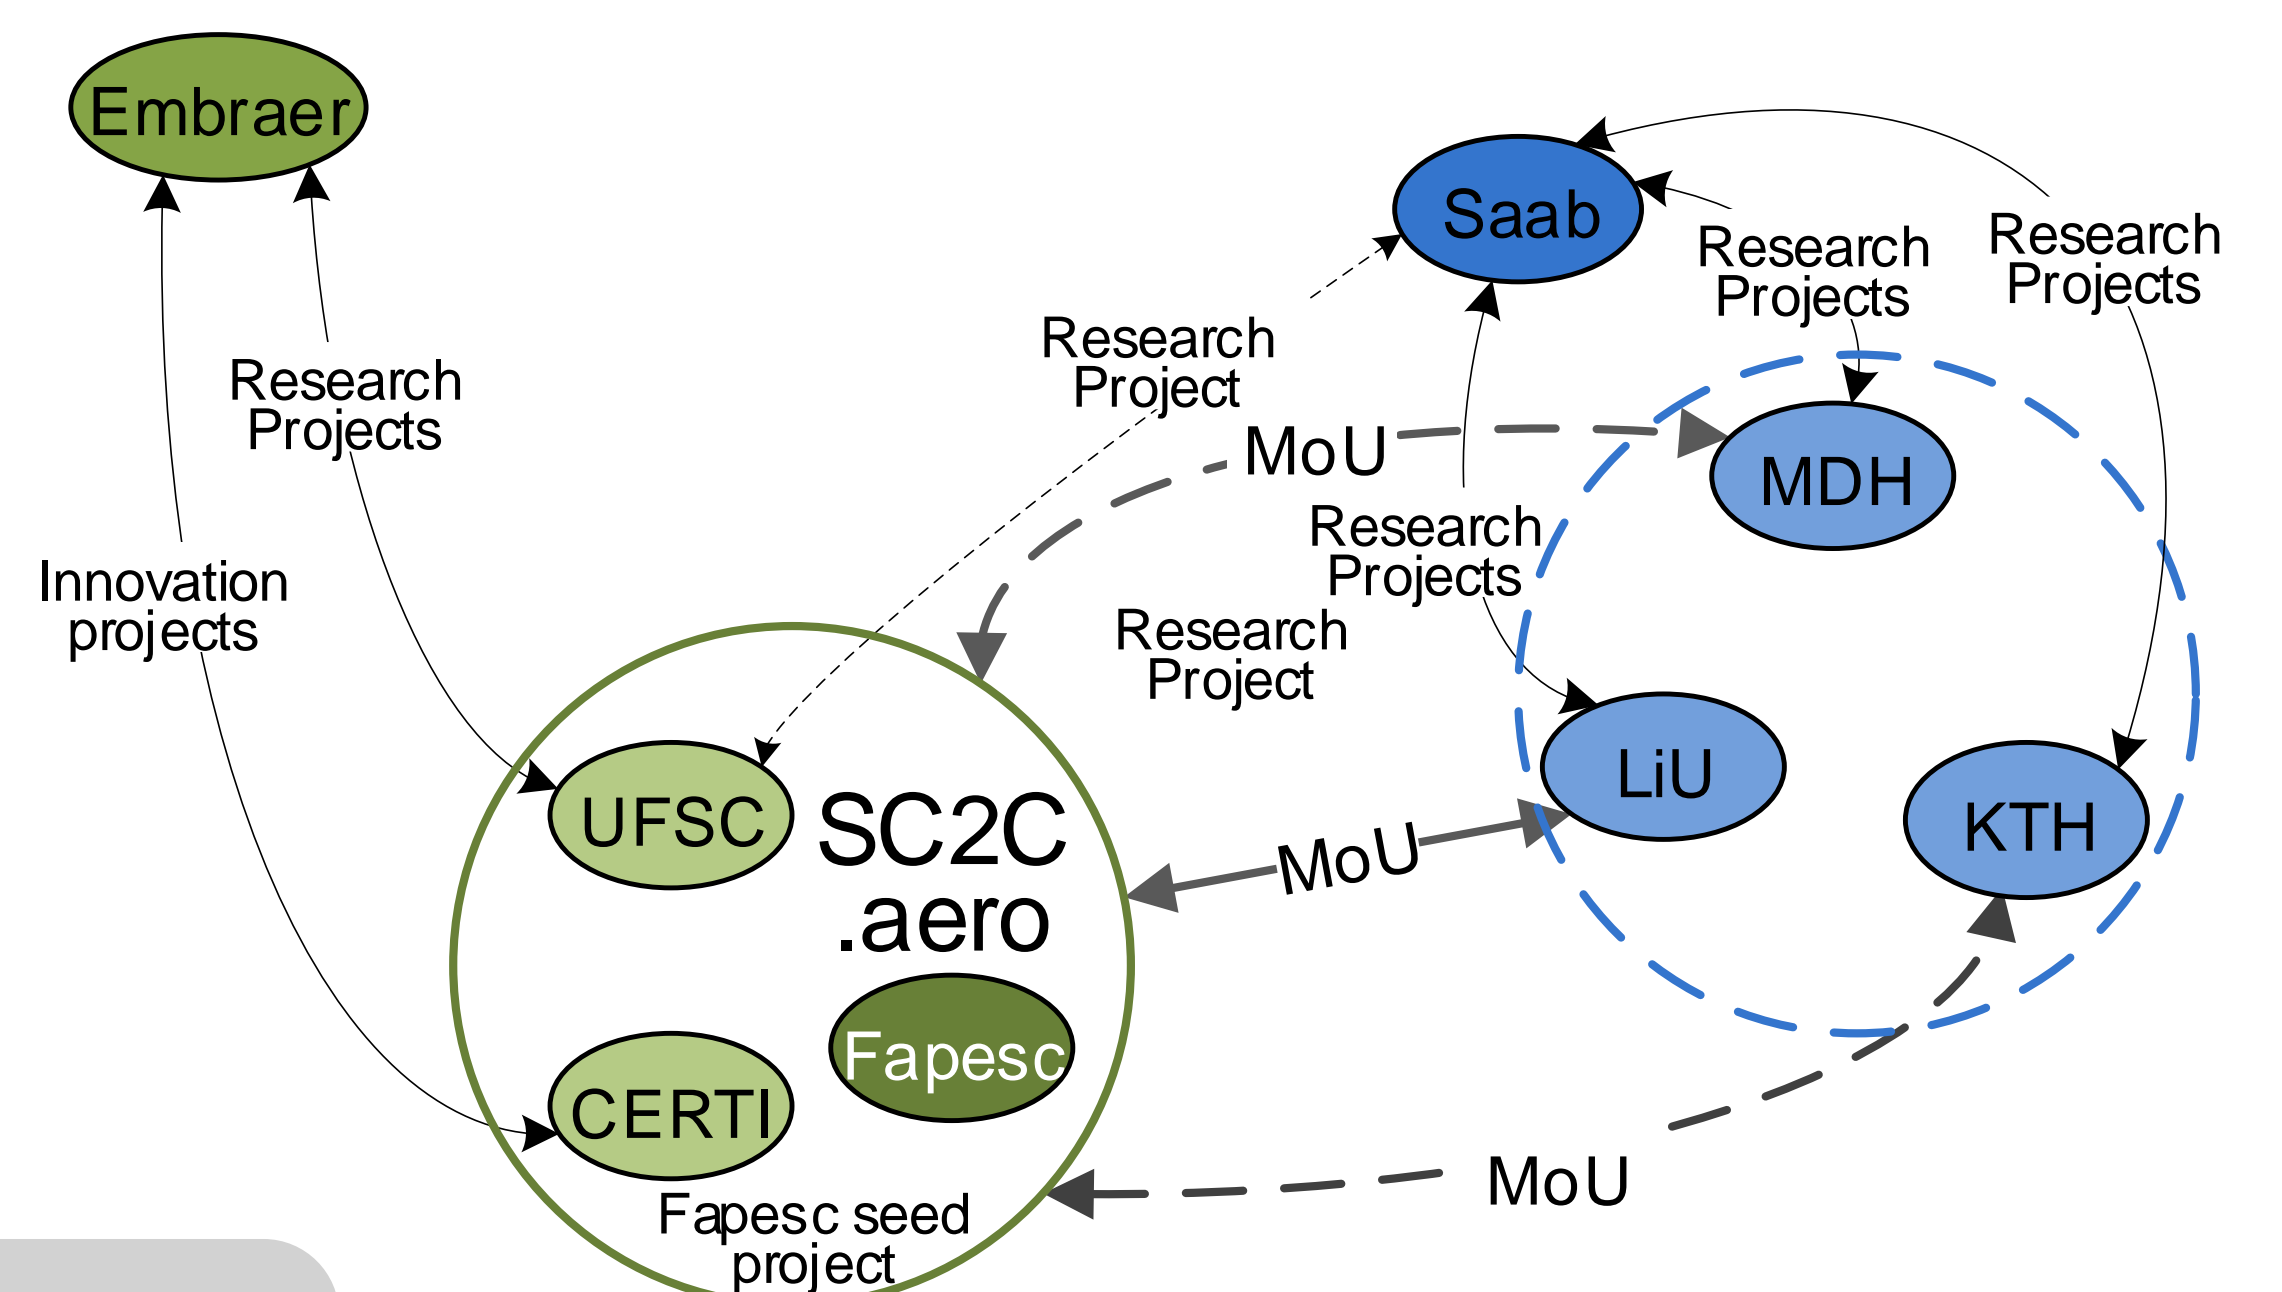

GOALS

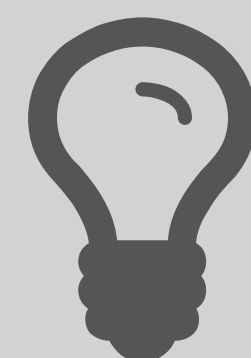

- Santa Catarina is a state on the south of Brazil with high levels R&D&I institutions.
- We are promoting a Convergence Center for Technologies on Aeronautics (SC2C), bringing the companies interests together with local competences through a common language (using ASTERA from EASN).
- Nowadays, we are 8 technical groups operating as a network and supported by Santa Catarina's government.

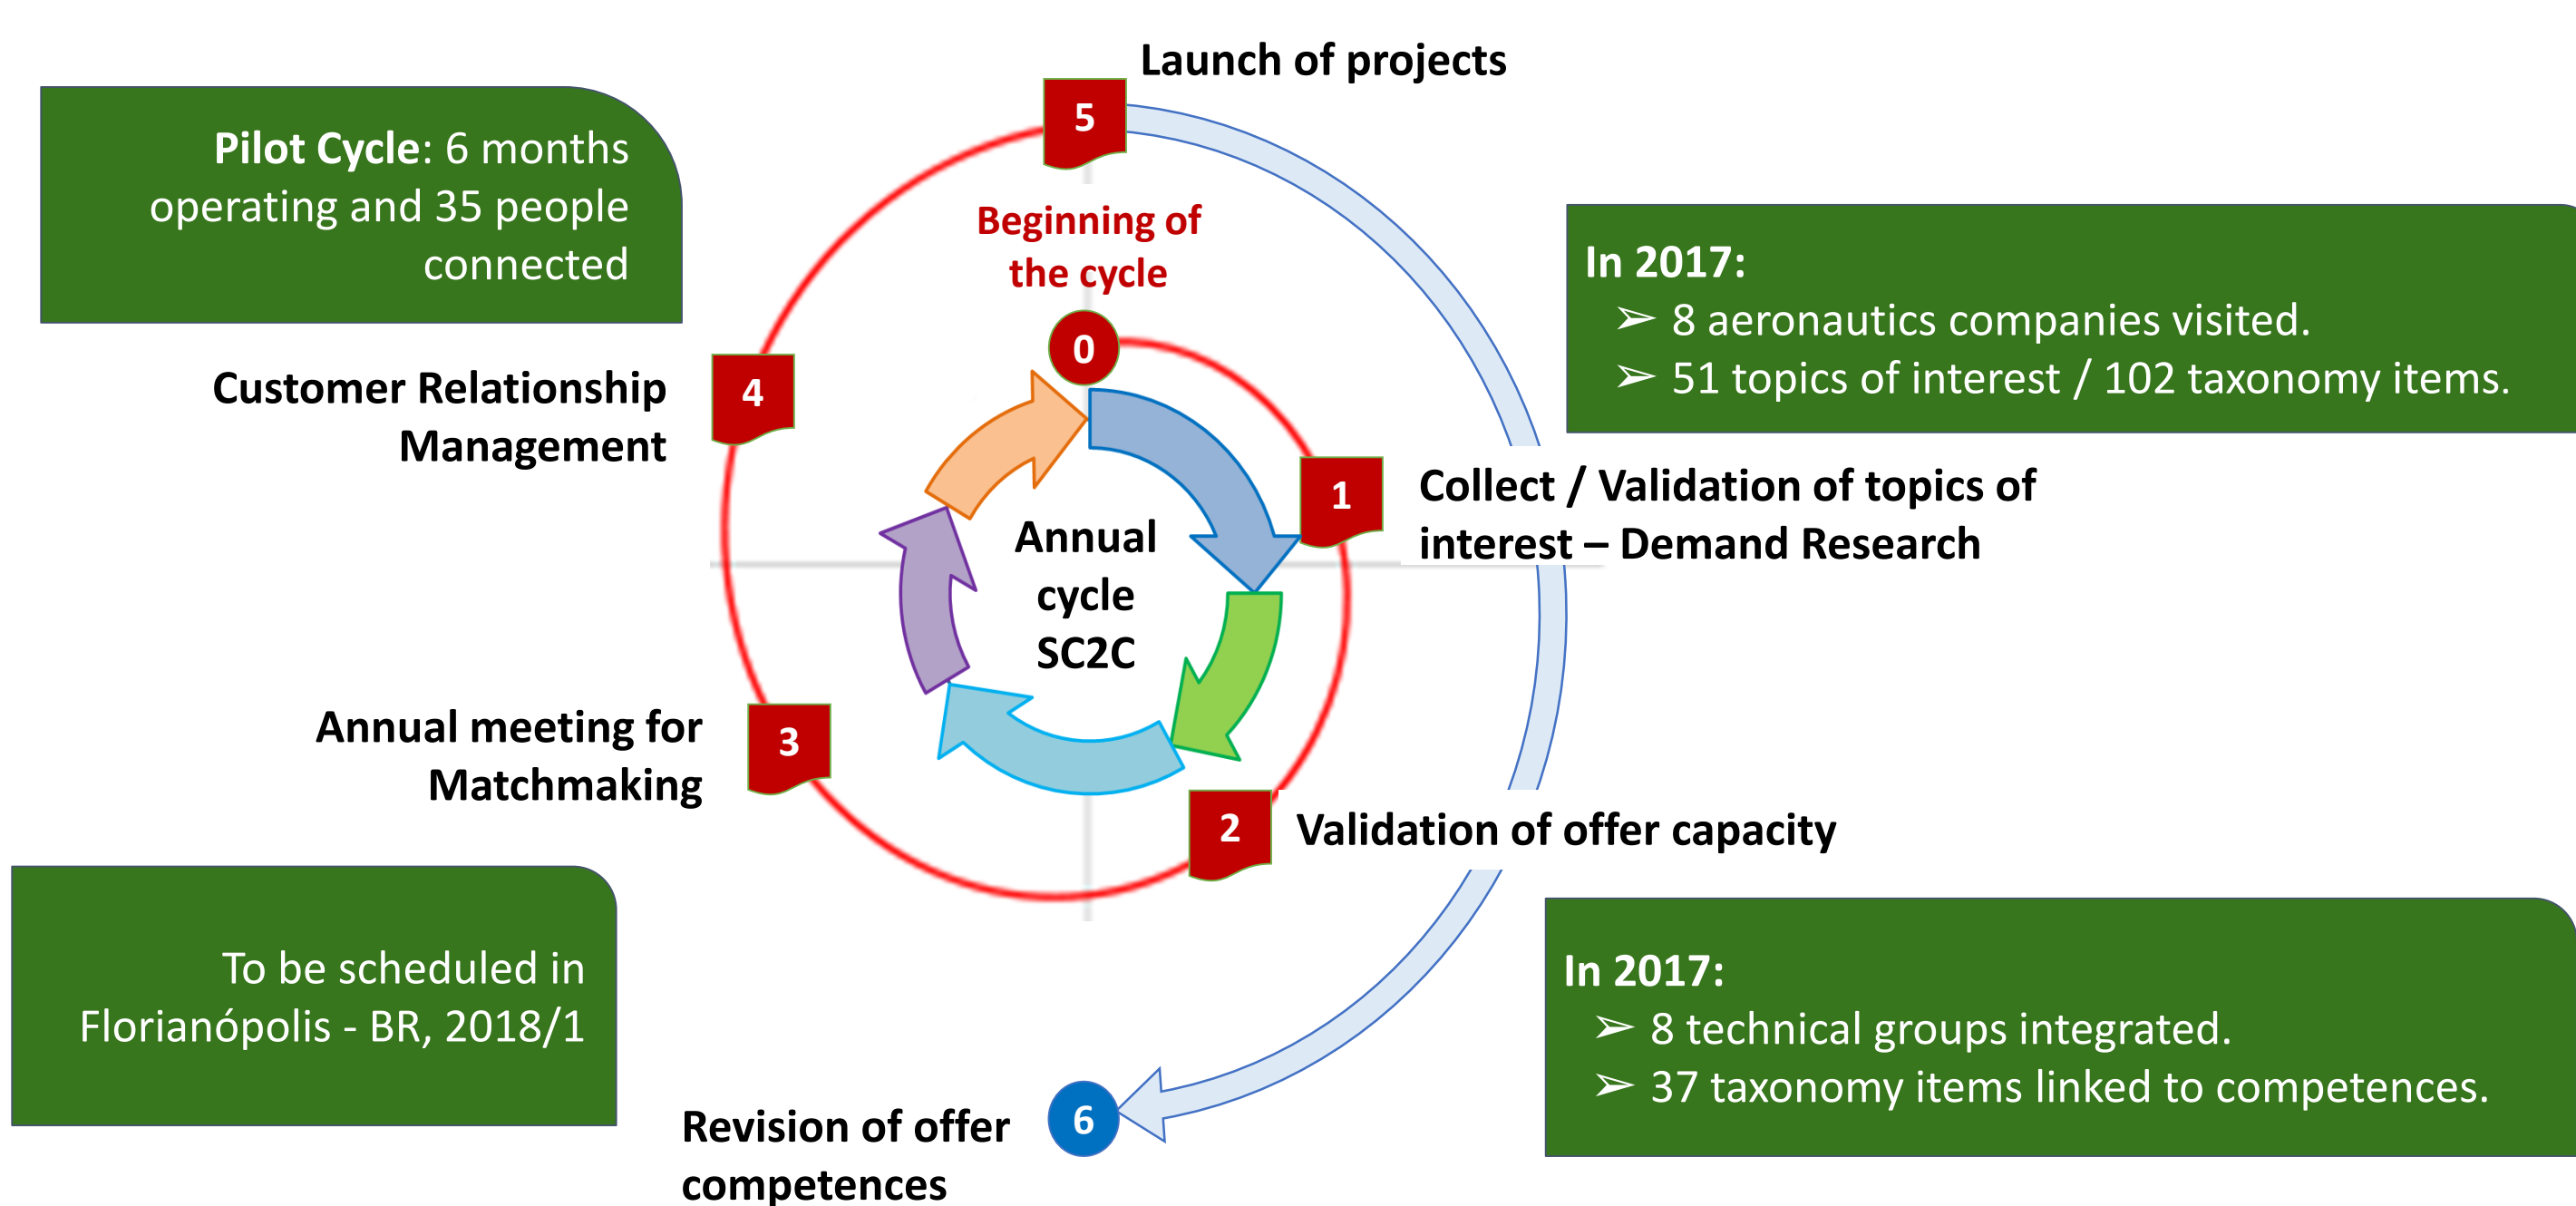

- Working with the same operational model together with Swedish institutions (LiU is the first institution with Memorandum of Understanding).
- Keep, in the same database, the demand from both countries and offer from partnerships, promoting high international impact matchmaking meetings every year.

APPROACH

- The network must work on cycles, growing by its own with interested technical groups supported by public funds and aiming companies demands. In 6 months (pilot cycle), 51 topics of interested were collected from companies and more than 60 people connected in Santa Catarina and Brazil.

Demand versus Offer ASTERA Taxonomy / pilot cycle
